

# Patient Fall Prevention SOP

|                |                    |
|----------------|--------------------|
| Document no.   | SOP-HLC-009        |
| Revision       | 1.0                |
| Owner          | Nurse Manager      |
| Effective date | September 15, 2026 |
| Review cycle   | Every 12 months    |

## 1. Purpose

To identify patients at risk of falling early, apply consistent interventions, and reduce the number and severity of falls on the unit.

## 2. Scope

Applies to fall risk assessment and prevention for adult inpatients. Pediatric fall prevention and response to a fall that has already occurred are covered by separate SOPs.

### Definitions

|                             |                                                                                                                                                 |
|-----------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Fall risk assessment</b> | A standardized tool used to score a patient's likelihood of falling based on factors such as mobility, medications and mental status.           |
| <b>Hourly rounding</b>      | A scheduled check-in with the patient roughly every hour to address needs such as pain, positioning, toileting and personal items within reach. |
| <b>Bed alarm</b>            | A device that alerts staff when a patient attempts to get out of bed unassisted.                                                                |

## 3. Responsibilities

|                                |                                                                                                          |
|--------------------------------|----------------------------------------------------------------------------------------------------------|
| <b>Registered Nurse (RN)</b>   | Completes the fall risk assessment, sets up interventions and reassesses risk after any status change.   |
| <b>Nursing Assistant (CNA)</b> | Performs hourly rounding, assists with mobility and toileting, and reports changes in patient condition. |
| <b>Charge Nurse</b>            | Confirms high-risk patients have interventions in place and reviews fall incidents on the unit.          |
| <b>Physical Therapist</b>      | Assesses mobility for high-risk patients and recommends assistive devices or activity levels.            |

### RACI matrix

| Activity                             | Registered Nurse (RN) | Nursing Assistant (CNA) | Charge Nurse | Physical Therapist |
|--------------------------------------|-----------------------|-------------------------|--------------|--------------------|
| Complete the fall risk assessment    | R/A                   | I                       | I            | C                  |
| Set up fall prevention interventions | R/A                   | R                       | I            | C                  |
| Perform hourly rounding              | R                     | R/A                     | I            | -                  |

| Activity                               | Registered Nurse (RN) | Nursing Assistant (CNA) | Charge Nurse | Physical Therapist |
|----------------------------------------|-----------------------|-------------------------|--------------|--------------------|
| Assess mobility for high-risk patients | C                     | I                       | I            | R/A                |

R = Responsible, A = Accountable, C = Consulted, I = Informed

## 4. Materials and PPE

### Materials, tools and systems

- Fall risk assessment tool in the EHR
- Bed and chair alarms
- Yellow fall-risk wristbands and door or bed signage
- Non-slip socks or footwear
- Hourly rounding log or checklist
- Assistive mobility devices (gait belt, walker, cane)

## 5. Procedure

| Step | Task                                                                                                                                                                                                                                                                                                                                        | Owner                   | Done                     |
|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|--------------------------|
| 5.1  | <b>Complete the fall risk assessment on admission</b><br>Complete the standardized fall risk assessment tool in the EHR within the required timeframe of admission, scoring mobility, medications, mental status and fall history.                                                                                                          | Registered Nurse (RN)   | <input type="checkbox"/> |
| 5.2  | <b>Reassess after any status change</b><br>Repeat the fall risk assessment after a change in condition, a new sedating medication, a procedure, or a transfer, in addition to the routine reassessment schedule.<br><b>Checkpoint:</b> Fall risk is reassessed after any significant change in condition, not only on the routine schedule. | Registered Nurse (RN)   | <input type="checkbox"/> |
| 5.3  | <b>Apply the fall-risk identifier</b><br>For patients scoring as high risk, apply the yellow wristband and post door or bed signage so all staff recognize the risk at a glance.                                                                                                                                                            | Registered Nurse (RN)   | <input type="checkbox"/> |
| 5.4  | <b>Set up the patient environment</b><br>Keep the bed in the lowest position with brakes locked, the call light and personal items within reach, and the path to the bathroom clear of clutter and cords.                                                                                                                                   | Nursing Assistant (CNA) | <input type="checkbox"/> |
| 5.5  | <b>Activate bed or chair alarms for high-risk patients</b><br>Turn on and test the bed or chair alarm for patients identified as high risk, and confirm it is functioning before leaving the room.<br><b>Checkpoint:</b> Bed and chair alarms for high-risk patients are tested and confirmed active at the start of each shift.            | Registered Nurse (RN)   | <input type="checkbox"/> |
| 5.6  | <b>Provide non-slip footwear</b><br>Provide non-slip socks or the patient's own non-slip footwear before any out-of-bed activity.                                                                                                                                                                                                           | Nursing Assistant (CNA) | <input type="checkbox"/> |
| 5.7  | <b>Request a mobility assessment for high-risk patients</b><br>Refer high-risk or newly deconditioned patients to physical therapy for a mobility assessment and recommended assistive device or activity level.                                                                                                                            | Registered Nurse (RN)   | <input type="checkbox"/> |

| Step | Task                                                                                                                                                                                                                                                                                                                                  | Owner                   | Done                     |
|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------|--------------------------|
| 5.8  | <b>Assist with transfers and ambulation</b><br>Use a gait belt and the recommended number of staff for transfers and ambulation according to the mobility assessment, never leaving a high-risk patient unattended during a transfer.<br><b>Warning:</b> Never leave a high-risk patient unattended while out of bed or mid-transfer. | Nursing Assistant (CNA) | <input type="checkbox"/> |
| 5.9  | <b>Perform hourly rounding</b><br>Round on every patient approximately every hour, addressing pain, positioning, toileting needs and placement of personal items within reach.                                                                                                                                                        | Nursing Assistant (CNA) | <input type="checkbox"/> |
| 5.10 | <b>Respond promptly to call lights and alarms</b><br>Answer call lights and bed or chair alarms as quickly as possible, especially for patients flagged as high fall risk.                                                                                                                                                            | Nursing Assistant (CNA) | <input type="checkbox"/> |
| 5.11 | <b>Communicate fall risk at handover</b><br>Include fall risk status, active interventions and any recent near-misses in the shift handover report for every patient.                                                                                                                                                                 | Registered Nurse (RN)   | <input type="checkbox"/> |
| 5.12 | <b>Review fall trends with the unit</b><br>Review fall and near-miss data at unit meetings, identify recurring contributing factors, and adjust interventions or staffing where needed.                                                                                                                                               | Charge Nurse            | <input type="checkbox"/> |

## 6. Quality checks

- 100 percent of admissions have a fall risk assessment completed within the required timeframe.
- All identified high-risk patients have an active bed or chair alarm and visible signage.
- Hourly rounding is documented for every patient every shift.
- Fall risk status is included in every shift handover report.

## 7. Records

- Fall risk assessment scores in the EHR
- Hourly rounding log
- Fall and near-miss incident reports
- Physical therapy mobility assessment notes

## 8. KPIs

- Falls per patient days
- Percentage of high-risk patients with active interventions in place
- Hourly rounding compliance rate
- Falls with injury as a share of total falls

## 9. Common mistakes

- Leaving a bed alarm turned off after repositioning the patient.
- Skipping fall risk reassessment after a new sedating medication is given.
- Leaving a high-risk patient unattended on the toilet or during a transfer.
- Not mentioning fall risk status during shift handover.
