

# Laboratory Chemical Storage SOP

|                |                    |
|----------------|--------------------|
| Document no.   | SOP-LAB-007        |
| Revision       | 1.0                |
| Owner          | Safety Officer     |
| Effective date | September 15, 2026 |
| Review cycle   | Every 12 months    |

## 1. Purpose

To store laboratory chemicals so that incompatible substances are segregated, containers stay labeled and intact, and stock levels are tracked and rotated before expiration.

## 2. Scope

Applies to the storage of chemicals on shelves, in cabinets and in dedicated storage rooms. Spill response and disposal of unwanted chemicals are covered by separate SOPs.

### Definitions

|                       |                                                                                                                              |
|-----------------------|------------------------------------------------------------------------------------------------------------------------------|
| Segregation class     | A grouping of chemicals, such as flammables, oxidizers, acids or bases, that must be stored apart from incompatible classes. |
| Secondary containment | A tray or bin placed under containers to catch leaks before they spread.                                                     |
| SDS                   | Safety Data Sheet describing a chemical's hazards, storage and handling requirements.                                        |

## 3. Responsibilities

|                       |                                                                                                    |
|-----------------------|----------------------------------------------------------------------------------------------------|
| Lab Technician        | Puts chemicals away correctly, checks labels and containers, and reports damage or expiring stock. |
| Safety Officer        | Maintains the segregation chart, inspects storage areas and approves exceptions.                   |
| Laboratory Manager    | Approves purchases, resolves capacity issues and reviews inspection findings.                      |
| Inventory Coordinator | Maintains the chemical inventory list and tracks expiration dates.                                 |

### RACI matrix

| Activity                                      | Lab Technician | Safety Officer | Laboratory Manager | Inventory Coordinator |
|-----------------------------------------------|----------------|----------------|--------------------|-----------------------|
| Check compatibility before storing a chemical | R/A            | C              | -                  | I                     |
| Maintain the segregation chart                | I              | R/A            | C                  | I                     |
| Update the chemical inventory list            | C              | I              | -                  | R/A                   |
| Inspect storage areas periodically            | C              | R/A            | I                  | C                     |

| Activity                                  | Lab Technician | Safety Officer | Laboratory Manager | Inventory Coordinator |
|-------------------------------------------|----------------|----------------|--------------------|-----------------------|
| Approve exception for a damaged container | R              | A              | I                  | I                     |

R = Responsible, A = Accountable, C = Consulted, I = Informed

## 4. Materials and PPE

### Materials, tools and systems

- Chemical segregation compatibility chart
- Flammable storage cabinet
- Secondary containment trays and bins
- Chemical inventory list or software
- Safety Data Sheets, physical or electronic
- Storage area inspection checklist

### Personal protective equipment

- Disposable nitrile gloves
- Safety glasses
- Closed-toe shoes

## 5. Procedure

| Step | Task                                                                                                                                                                                                                                                                                                    | Owner          | Done                     |
|------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------|--------------------------|
| 5.1  | <b>Check compatibility before storing</b><br>Before putting a chemical away, check its SDS and the segregation chart to identify its class, such as flammable, oxidizer, acid, base or water-reactive.                                                                                                  | Lab Technician | <input type="checkbox"/> |
| 5.2  | <b>Verify the container label</b><br>Confirm the container has an intact label showing the chemical name, hazard information and receipt date before placing it in storage.<br><b>Warning:</b> Never store an unlabeled or illegibly labeled container; relabel it immediately using the SDS.           | Lab Technician | <input type="checkbox"/> |
| 5.3  | <b>Store by segregation class</b><br>Place the chemical in the storage location assigned to its segregation class, keeping incompatible classes on separate shelves or in separate cabinets.<br><b>Checkpoint:</b> No incompatible chemical classes share the same shelf or secondary containment tray. | Lab Technician | <input type="checkbox"/> |
| 5.4  | <b>Use secondary containment</b><br>Place containers of corrosive or hazardous liquids into a secondary containment tray sized to hold the contents of the largest container if it leaks.                                                                                                               | Lab Technician | <input type="checkbox"/> |
| 5.5  | <b>Store flammables in the rated cabinet</b><br>Place flammable and combustible liquids in the approved flammable storage cabinet, keeping the door closed except when adding or removing containers.                                                                                                   | Lab Technician | <input type="checkbox"/> |
| 5.6  | <b>Follow shelf placement rules</b><br>Store heavier containers on lower shelves, keep corrosives below eye level, and never store chemicals above eye level or on the top shelf without a lip.                                                                                                         | Lab Technician | <input type="checkbox"/> |

| Step | Task                                                                                                                                                                                            | Owner                 | Done                     |
|------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------|--------------------------|
| 5.7  | <b>Update the inventory list</b><br>Record the chemical name, quantity, lot number, receipt date and storage location in the chemical inventory list or software.                               | Inventory Coordinator | <input type="checkbox"/> |
| 5.8  | <b>Check expiration and shelf-life dates</b><br>Review the inventory list monthly for chemicals nearing their expiration or recommended shelf-life date and flag them for use or disposal.      | Inventory Coordinator | <input type="checkbox"/> |
| 5.9  | <b>Rotate stock</b><br>Place newly received containers behind existing stock of the same chemical so older containers are used first.                                                           | Lab Technician        | <input type="checkbox"/> |
| 5.10 | <b>Inspect storage areas</b><br>Walk through storage areas on the scheduled frequency using the inspection checklist, checking for leaks, damaged containers, blocked exits and missing labels. | Safety Officer        | <input type="checkbox"/> |
| 5.11 | <b>Respond to damaged containers</b><br>Move a damaged or leaking container to a compatible secondary container or the spill kit area, and report it for disposal or repackaging.               | Lab Technician        | <input type="checkbox"/> |
| 5.12 | <b>Keep SDS access current</b><br>Confirm the SDS library, physical or electronic, is complete and accessible for every chemical currently in storage.                                          | Safety Officer        | <input type="checkbox"/> |

## 6. Quality checks

- No incompatible chemical classes are stored together.
- Every container in storage has a legible, intact label.
- Flammable liquids are stored only in the rated cabinet.
- The chemical inventory list matches a physical spot check of storage areas.

## 7. Records

- Chemical inventory list
- Storage area inspection checklist
- Segregation compatibility chart
- SDS library

## 8. KPIs

- Percentage of storage inspections with zero findings
- Number of expired chemicals found per inventory review
- Number of mislabeled or unlabeled containers found
- Time to resolve a reported storage hazard

## 9. Common mistakes

- Storing acids and bases, or oxidizers and flammables, on the same shelf.
- Leaving a flammable cabinet door propped open during a shift.
- Storing a heavy container above eye level.
- Letting the inventory list fall out of date with actual stock.

## 10. Revision history
